REVIEWED BY: Wayne S. Walker, reviewer with Stories for Children Magazine Did you know that tonsillectomies and adenoidectomies (T&As) account for the second most common surgical procedure performed on children in the United States and that they account for one-third of all surgeries performed under general anesthesia in the U.S.? Thus, if you are a parent of young children, there is a great possibility that your child may need to have a T&A. Based on her own experience with her son Jordan's T&A, author Laurie Zelinger, a school psychologist and a private practice licensed psychologist, offers this manual to help both parents and children navigate the necessary preparation for these common surgical procedures. This preparation is divided into four phases: Phase 1 is "Introducing the Topic to Your Child," which occurs one to two months before surgery. Phase 2 is "Tackling the Subject," which explains what to tell the child three to four weeks before surgery. Phase 3 is "Getting Closer, Getting Ready," with one to two weeks to go. And phase 4 is "The Day of Surgery--It's Here!" and describes what will follow in the recovery. Neither of our sons have had a T&A, but when our older, eighteen-year-old son, Mark, was five, he had to undergo a year-long series of four surgeries to correct a problem with his left ear. Consequently, my wife and I are well-aware of the need for young children to be properly prepared for such operations. Zelinger notes, "If you do not have the luxury of several weeks of preparation, read through this manual in its entirety and select those recommendations that are practical for your lifestyle and time frame, condensing and accelerating the suggestions to fit your schedule.
