# Critical Care Intravenous Infusion Drug Handbook, 1e

## **Synopsis**

This practical, easy-to-use reference facilitates the administration of 39 of the most complex and common IV infusion drugs used in critical care. Section I presents at-a-glance algorithms covering the ACLS Guidelines for Adult Emergency Cardiac Care. Section II offers a "Quick Mixing Guide" for intravenous infusion drugs. And, Section III covers each of the most complex and common IV infusion drugs in detail, presenting all of the data needed for safe administration. Coverage of each drug addresses its most common uses Â preparation and administration Â dosages Â warnings and adverse reactions Â compatibility with other drug infusions Â and general nursing considerations. "Drip Rate Calculation Charts" and "Dosing Charts" quickly explain how to mix and prepare drugs that are usually needed by patients on an immediate, urgent basis. Unique "Calculation Factors" for each drug greatly simplify an otherwise complicated process and substantially reduce the chance of medication errors.

## **Customer Reviews**

This is a very good reference. Has basically all drugs used in ICU and ACLS with drip calculation tables. good descriptions of the drugs and in larger print as well which makes finding things a lot easier.

Great book to use in the ICU! It has come in very handy when I have multiple drips to run. It allows me to see compatibilities with other drips and the nursing implications in a nutshell! It is concise and

accurate. Thanks!

I have been an ICU nurse for 10 years. This little book has become my bible. It is a quick reference guide not bogged down by "non-nursing stuff". The Compatibility guides are invaluable. I just bought the 3rd edition, donating my dogeared 2nd edition to our "med room" The only criticism I have is that it would be helpful if the author referenced half lifes of the drugs. Other than that this handbook is a gem.

I was hoping to get a more extensive list of interactions, that is why I bought it. If you do not know IV drips well, this would be a good resource. If you already know drips and do not have something like Lexicomp or King's List available, then this might help in a pinch....especially if the computers are down.

I bought this after getting a position in ICU and wanted something I could quickly reference. However, while the medications listed are definitely ones used frequently in critical care, it's definitely not an all inclusive list. I have accessed this book a few times so far and was unable to find the medication I needed. The medications that are listed, however, are described thoroughly in only a few short sentences and with available drip rates, which is helpful when needing to look up information quickly.

While I am looking for the quick and to-the-point facts regarding the drugs within the book, the book simply doesn't give me all the facts. I want to know a little more about, for example, drip dosages instead of just the push dosage for a particular drug. While it is a convenient source of drug information given its layout, I don't think it delivers on all the aspects that one might want in a book like this. However, if you just need a simple reference and are confident in all the details regarding your drugs of choice, then this book is for you.

Lost my original book and just purchased the updated version. Indispensable. Everything you need to know about the critical care IV medication is at your fingertips, including compatibility. Excellent reference material included at the back of the book.

This is a great, easy to use and accurate resource. The only complaint I have is that because it is spiral and I carry it in my pocket, it got a little worn out and I lost the cover. I bought another one

when my first got too ragged to use.
